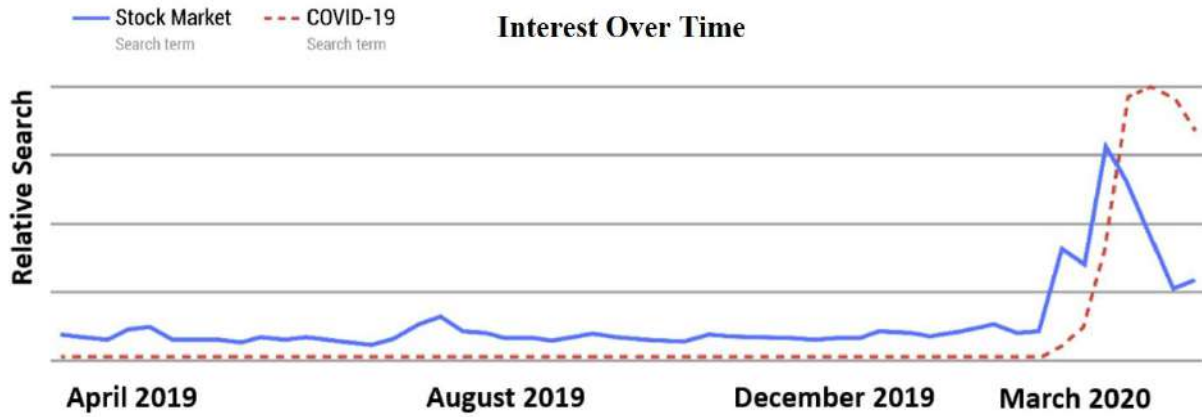

Figure 1.1: “COVID-19” and “Stock Market” keyword Google search trends between April 2019 and April 2020. As you can see, there is a clear correlation. As the stock market drop hit the news cycles, people started searching more and more about the stock market on Google!

Figure 1.2: GameStop Corp. (GME)'s stock price surge in January 2021, climbing from around \$20 to over \$500 per share, prior to the 4-for-1 stock split on July 22, 2022 (which is not shown in this weekly chart). In July 2022, GME implemented a 4-for-1 stock split, effective July 22, 2022. This means each share was divided into four, reducing the price per share accordingly. As a result, historical stock prices appear lower when adjusted for the split. For instance, the peak price of over \$500 in January 2021 was then reflected as approximately \$125 post-split (as is shown in this figure).

Figure 1.3: Search interest for the term “how to buy bitcoin” over the 90 days before the November 5, 2024 U.S. election versus the days after the election, highlighting a sharp increase in interest following the re-election of Donald Trump. This surge in search volume coincides with a significant rise in Bitcoin’s price, illustrating the strong correlation between market sentiment and political events.

Figure 1.4: President Trump's Truth Social post at 9:37 a.m. ET on April 9, 2025 (and how both the market and I responded).

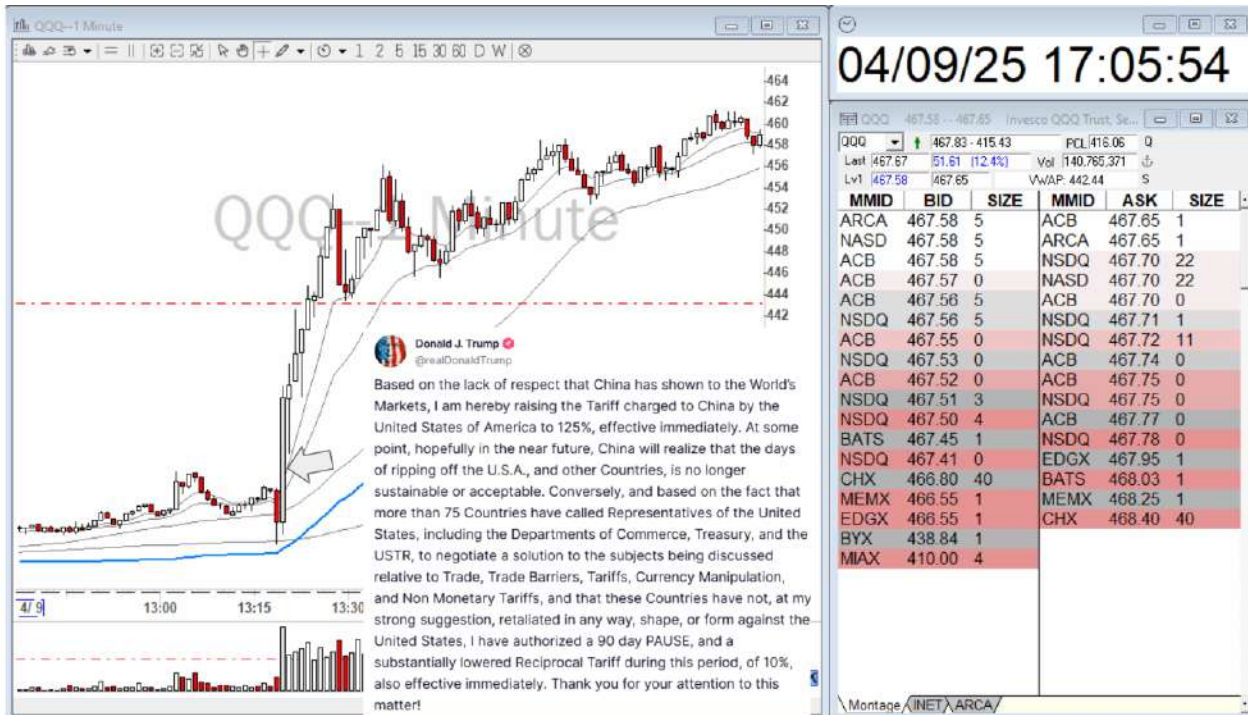

Figure 1.5: President Trump's April 9, 2025 afternoon announcement pausing tariffs for most of the world (and how both the market and I responded).

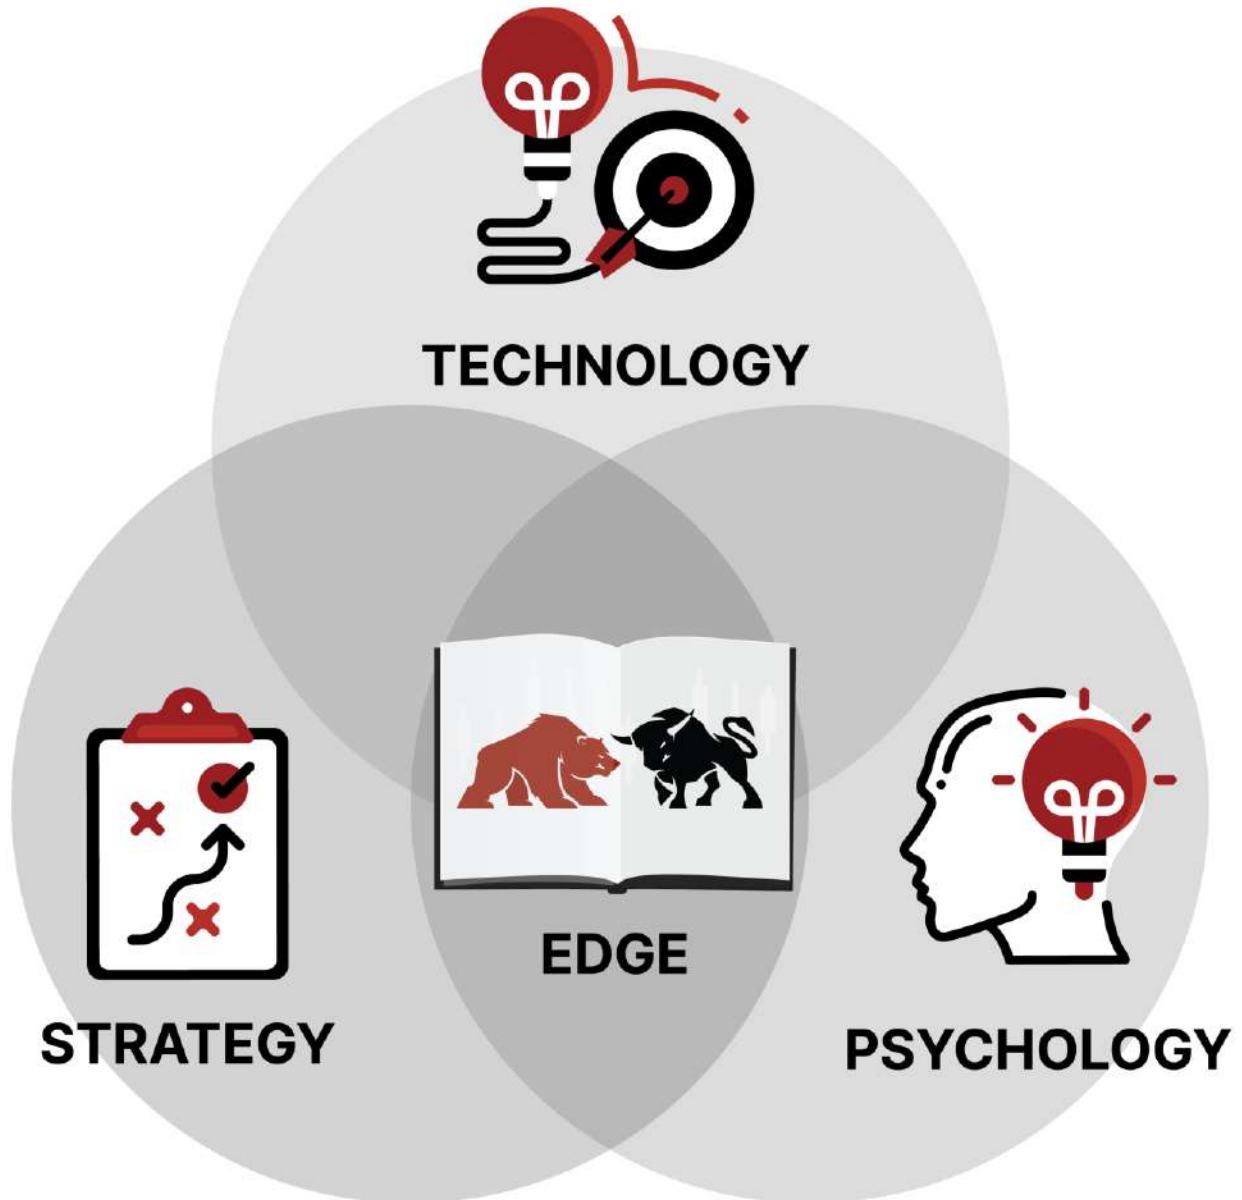

Figure 1.6: How a TradeBook is built around three pillars—strategy, psychology, and technology—and how they’re all bonded together.

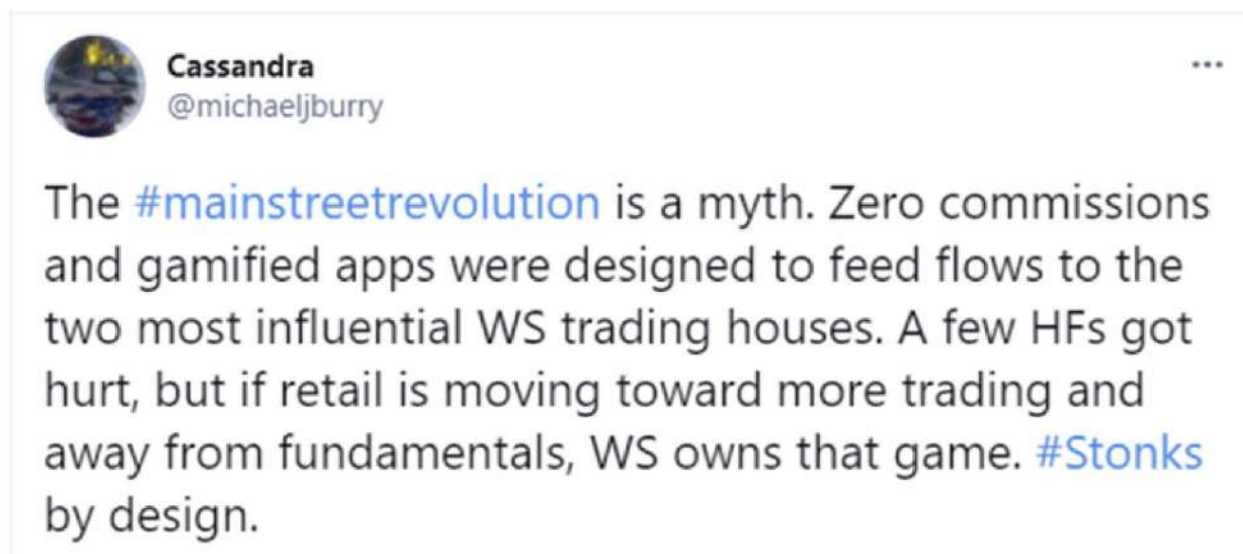

Figure 2.1: Now deleted tweet of Dr. Michael Burry expressing concerns about trading apps like Robinhood.

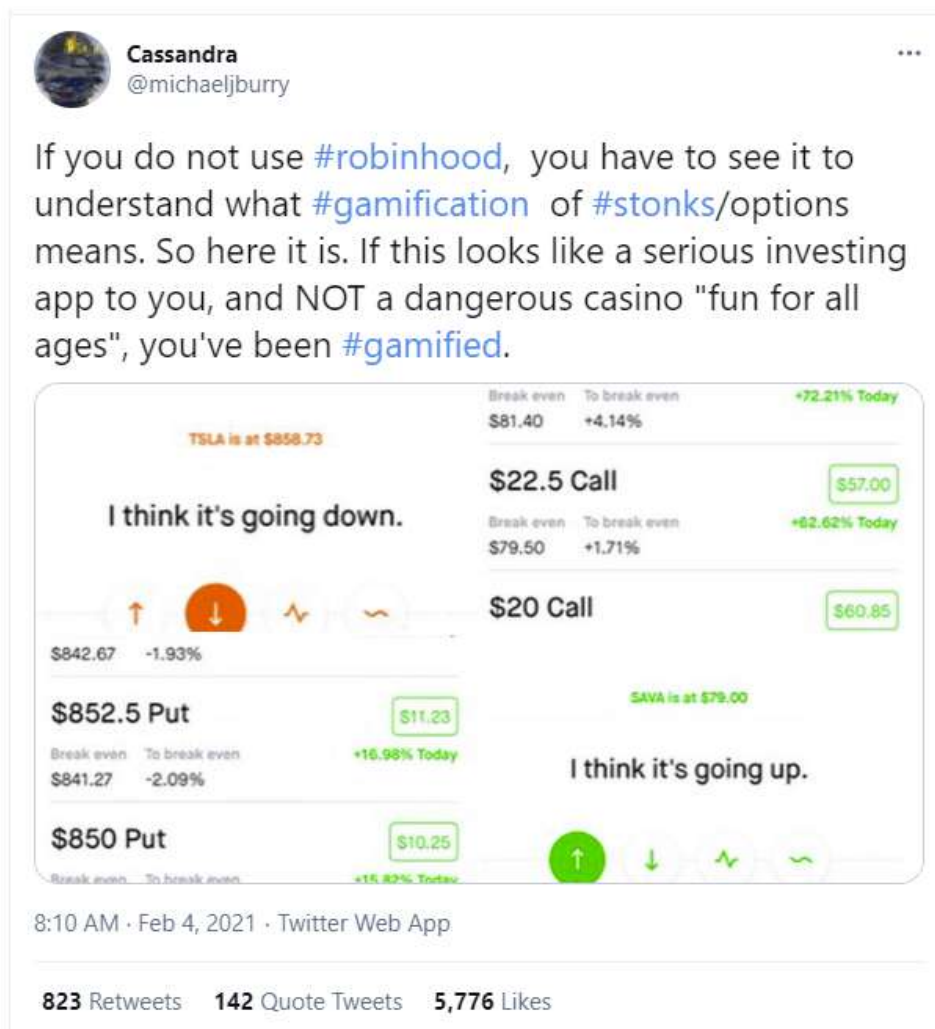

Figure 2.2: Two screenshots from the Robinhood app tweeted by Dr. Michael Burry

Figure 2.3: Photograph of my home trading station. (1-6) Six 27” BenQ monitors, each priced at around \$150, providing a multi-screen setup for enhanced market analysis and execution. (7) A simple yet functional Logitech keyboard and mouse combo, costing approximately \$25, ensuring smooth order entry and navigation. (8) A sturdy standing desk, valued at around \$400, allowing for ergonomic flexibility, enabling both seated and standing trading sessions for better posture and focus.

Figure 2.4: Photograph of my traveling trading station.

Figure 2.5: The Tilt Effect in trading. A funded trader's equity curve showing steady, consistent growth over a number of weeks, only to collapse in just one or two bad days after going on tilt or turning into the "hulk mode". Trust me, this is not an isolated example, and it highlights the importance of trading psychology and emotional discipline in long-term success.

Figure 2.6: Example of Nasdaq Level 2 data for NVIDIA Corporation (NVDA) near the start of the trading day on March 14, 2025. The number of shares (the “SIZE”) is displayed in hundreds ($\times 100$), meaning each lot in the bid or ask column represents 100 shares. A large ask order of 3,861 at \$120.00 represents a total sell order of 386,100 shares.

Figure 2.7: Screenshot of the type of chart I use with my indicators marked on it. Note: I do not color-code my moving averages. The smaller ones stay closer to the price — they “hug” or “kiss” the price more often. The 20 EMA is always closest to the price, followed by the 50 SMA, and then the 200 SMA.

Figure 2.8: Breakout versus reversal TradeBooks based on Camarilla pivot points. (A) Oscillation between R3 and S3: The price fluctuates between R3 and S3, forming a choppy range. You can short near R3 and buy near S3, expecting oscillation within the defined price channel. (B) Breakout of S4 and R4: The price initially moves within the S4/R4 range. A breakout above R4 signals a long opportunity, while a break below S4 indicates a short setup, confirming strong directional momentum.

Figure 3.1: Examples of candlesticks.

Bulls tried to push the price up, but they did not manage to hold a significant high

Bears tried to push the price down, but they did not manage to hold a significant low

Figure 3.2: Buying and selling pressure definition on a Doji.

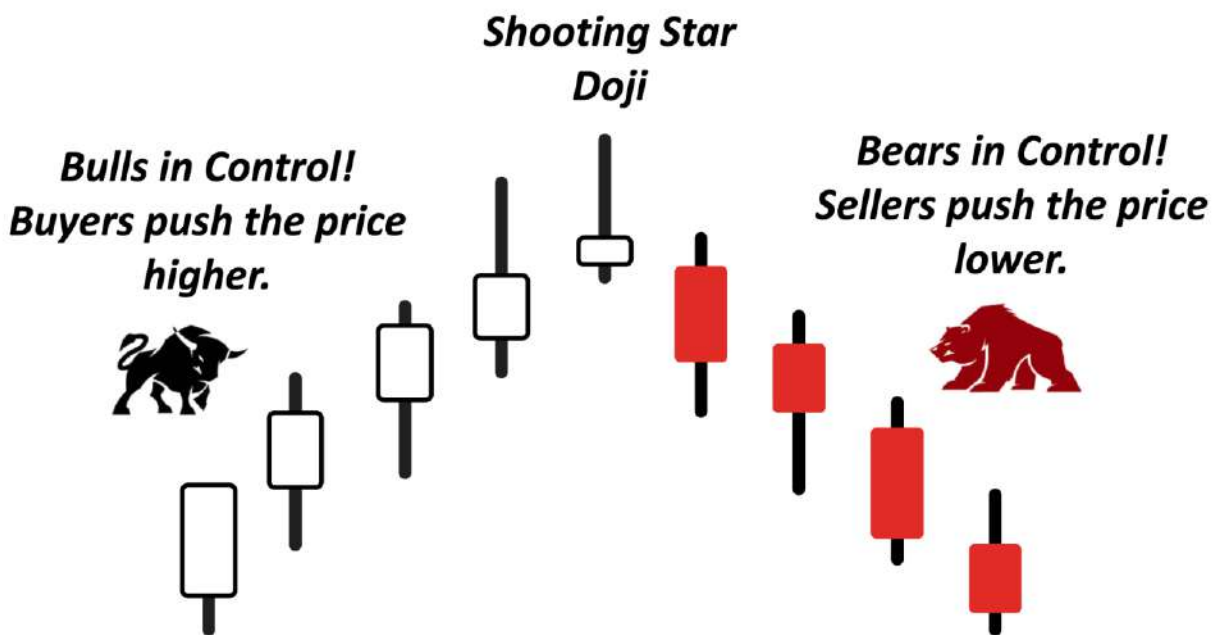

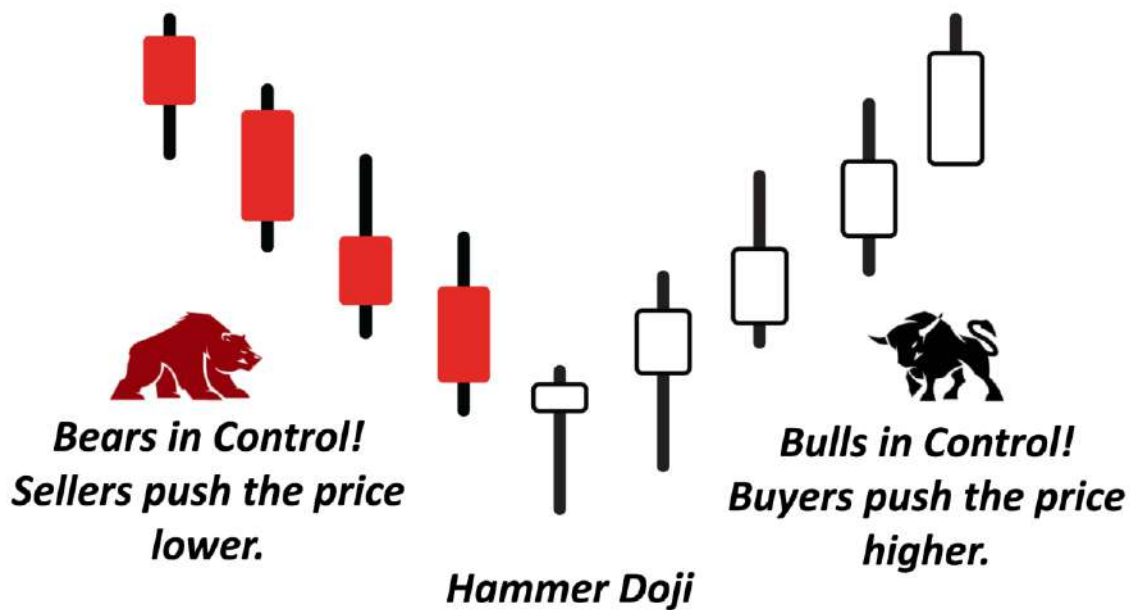

Figure 3.3: Examples of Bottom and Top Reversal Strategies with an indecision candlestick formed as a sign of entry.

Figure 3.14: Example of 5-minute ORB on DraftKings Inc. (DKNG) on September 17, 2020.

Figure 3.15: Example of 5-minute ORB on Micron Technology, Inc. (MU) on December 19, 2019.

Figure 3.16: Example of 5-minute ORB on NIO Inc. (NIO) on September 17, 2020.

Figure 3.17: A comparison between the equity curve performance of the ORB portfolio that day traded the Invesco QQQ Trust (QQQ) ETF (both long and short) and the equity curve performance of the portfolio that passively utilized a simple buy-and-hold strategy in QQQ. Gray highlighting has been used to show when there were bear markets.

Figure 3.18: A comparison between the equity curve performance of the ORB portfolio that day traded the Invesco QQQ Trust (QQQ) ETF (both long and short) without any leverage constraints, the equity curve performance of the ORB portfolio that day traded the ProShares UltraPro QQQ (TQQQ) ETF (both long and short), and the equity curve performance of the portfolio that passively utilized a simple buy-and-hold strategy in QQQ and TQQQ. Gray highlighting has been used to show when there were bear markets.

Figure 3.19: A comparison between the equity curve performance of the ORB portfolio that day traded the ProShares UltraPro QQQ (TQQQ) ETF (both long and short) with a stop equal to 5% of the 14-day ATR and with end of the day profit-taking, and the equity curve performance of the portfolio that passively utilized a simple buy-and-hold strategy in Invesco QQQ Trust (QQQ) and TQQQ. Gray highlighting has been used to show when there were bear markets.

Figure 3.20: Example of 5-minute Engulfing Crack on NVIDIA Corporation (NVDA) on June 2, 2023 on a 5-minute chart.

Figure 3.21: Example of 5-minute Engulfing Crack on NVIDIA Corporation (NVDA) on June 2, 2023 on a 1-minute chart. The 1-minute chart provides a better resolution for you to see my entries and exits.

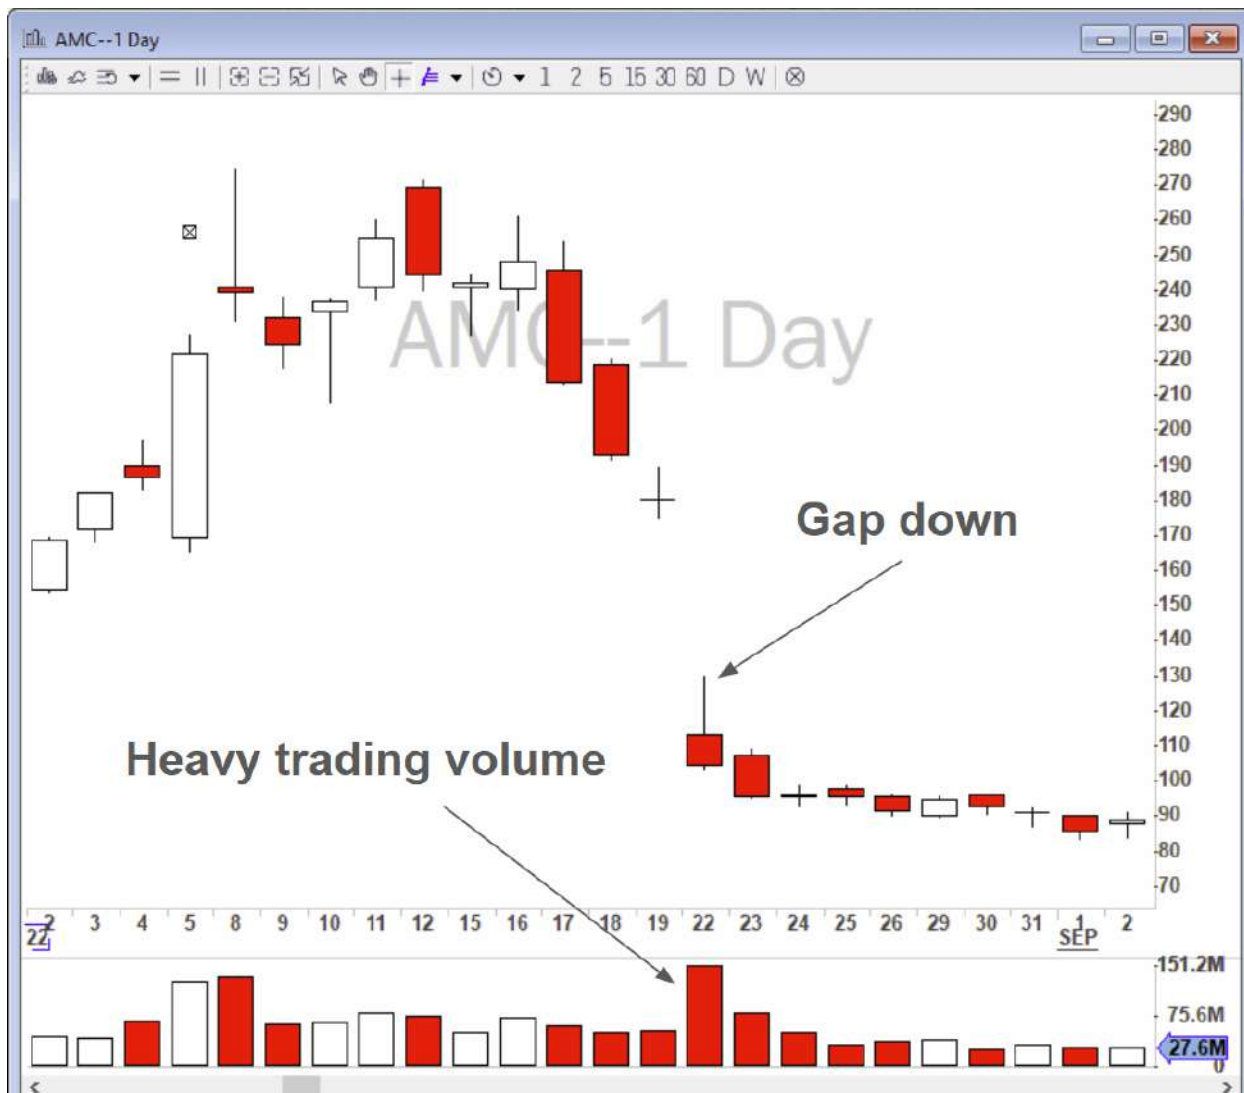

Figure 3.22: Daily chart of AMC Entertainment Holdings Inc. (AMC) showing a big drop in value in pre-market trading on August 22, 2022. Note: AMC executed a 1-for-10 reverse stock split on August 24, 2023. This split increased the stock price by a factor of ten, which may cause discrepancies when comparing historical prices before and after this date. I took this particular screenshot after the reverse split, but the two figures that follow in this example are screenshots from before the reverse split (and thus show the stock price in August 2022).

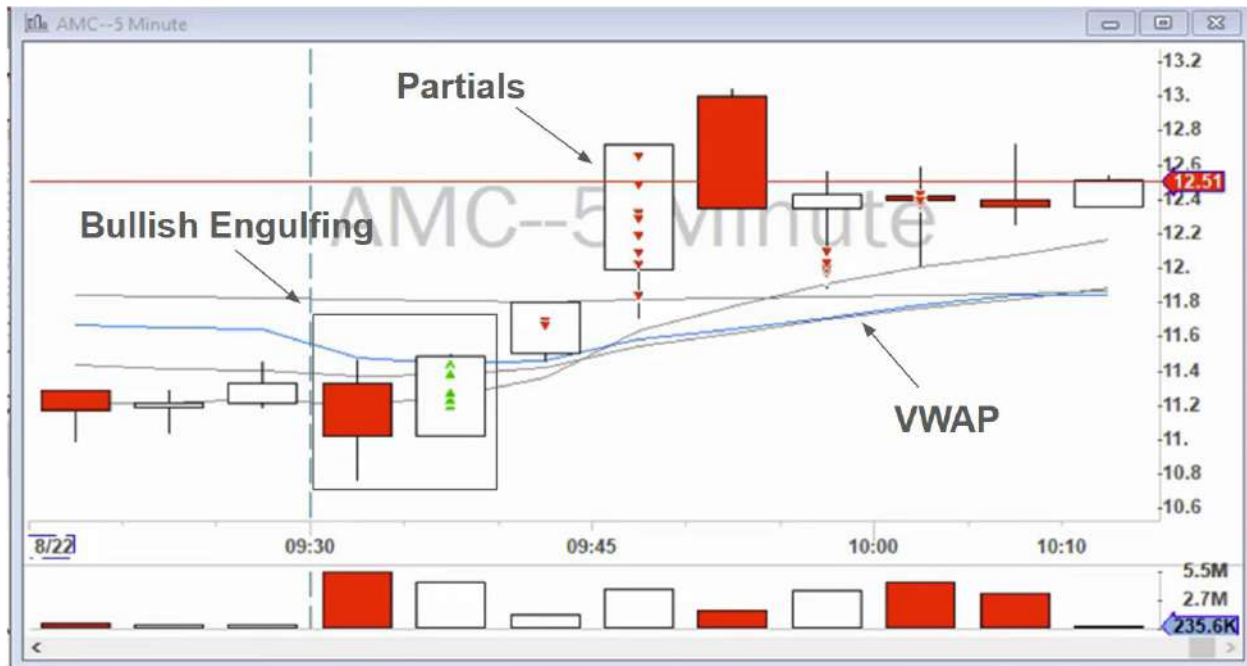

Figure 3.23: Example of 5-minute Bullish Engulfing Pattern on AMC Entertainment Holdings Inc. (AMC) on August 22, 2022.

Figure 3.24: Example of 5-minute Bullish Engulfing Pattern on AMC Entertainment Holdings Inc. (AMC) on August 22, 2022 on a 1-minute chart. The 1-minute chart provides a better resolution for you to see my entries and exits. The dotted lines show where the stock's volatility led to the exchange halting trading for 5 minutes. Note: This chart has been recreated for demonstration and educational purposes, and while it reflects my approximate main entry and exit points, it is not an exact representation of my actual trades.

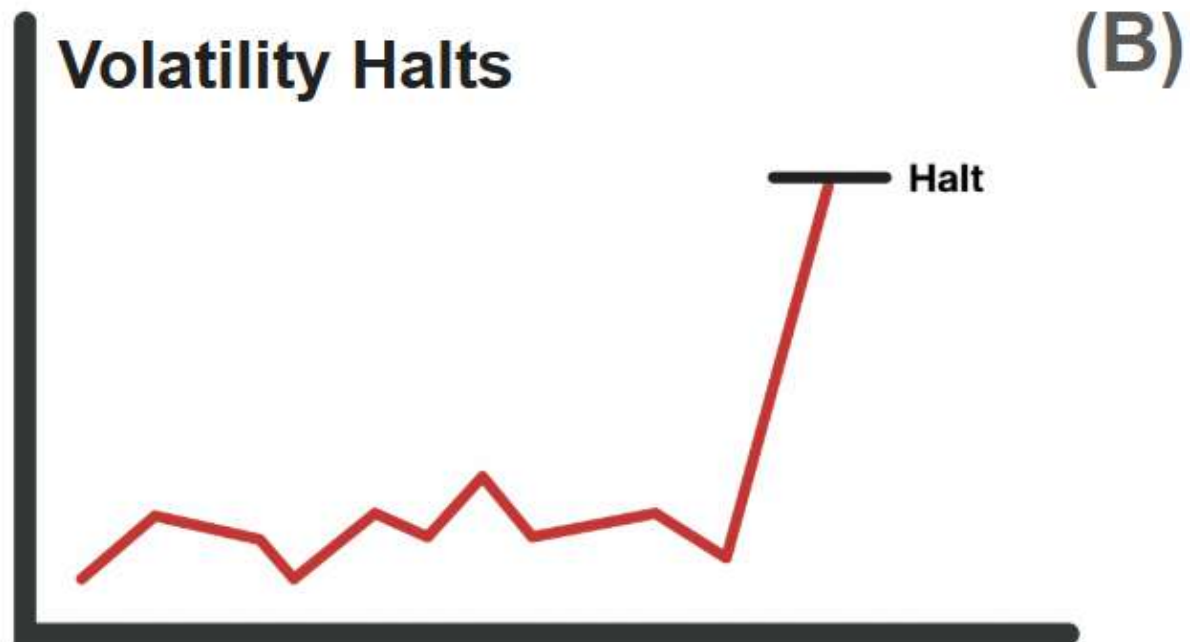

Figure 3.25: (A) Conceptual illustration of a news halt, where a sudden price movement triggers a trading halt for 10 to 15 minutes as the market digests the news, followed by a resumption of trading. (B) Conceptual illustration of a volatility halt, where a rapid price increase or decrease (typically 5 to 10%) causes an automatic 5-minute trading halt before trading continues.

Figure 3.26: Example of 9/20 Reversal Strategy on ViacomCBS Inc. (VIAC) on a 2-minute chart. The entry was at 20 EMA, the first target was at 9 EMA, and then the next target for additional partials was near the high of the day. The stop loss was the 2-minute candlestick just below the 20 EMA.

Figure 3.27: Example of Apple Inc. (AAPL) trading on July 9, 2021 near its all-time high before pulling back to the 20 EMA.

Figure 3.28: Additional view of Apple Inc. (AAPL) trading on July 9, 2021 near its all-time high.

Figure 3.29: My execution of a trade on Apple Inc. (AAPL) on July 9, 2021, as seen on a 2-minute chart.

Figure 3.30: Example of short 9/20 Reversal Strategy on Tesla, Inc. (TSLA) on a 2-minute chart on November 14, 2024.

Best Common Name	Winning Spaces	Payout	Odds Against Winning
Straight up	Any single number including 0	35 to 1	36 to 1

TradeBook 1-min Opening Range Breakouts

Selection

Which Stocks in Play

	Stock in Play in Pre-Market	1-min ORB Up	1-min ORB down
Strong ↑	Gap up trades above but extended from VWAP before Open		Possibly (risky)
	Gap up trades above but near VWAP before Open	A+	avoid
	Gap up trades below but near VWAP before Open	if "claims" VWAP	if "loses" VWAP
	Gap up trades below but extended from VWAP before Open	Fallen angel maybe?	
Weak ↓	Gap down trades above but extended from VWAP before Open		
	Gap down trades above but near VWAP before Open	if "claims" VWAP	if "loses" VWAP
	Gap down trades below but near VWAP before Open	avoid	A+
	Gap down trades below but extended from VWAP before Open	Rising devil maybe?	

Figure 4.3: Stock selection criteria chart in my 1-minute ORB TradeBook.

Figure 4.4: Daily chart of TSLA, Inc. (TSLA) for the first part of the summer of 2024. The days that TSLA had a high relative volume are marked. Those days were suitable for day trading TSLA.

Figure 4.5: Daily chart of MicroStrategy Incorporated (MSTR) for part of 2024. The days that MSTR had massive volume compared to the relative volume of a normal trading day are marked. On those days, MSTR was usually a Stock in Play.

Figure 4.6: Daily chart of Virgin Galactic Holdings Inc. (SPCE) for the winter and spring of 2020. I have placed a box around the group of days that SPCE had a high relative volume. Those days were suitable for day trading SPCE. You will see that those were the same days that the price of the stock gapped up or down.

Figure 4.7: Banner for the Bear Bull Traders YouTube channel. I encourage you to tune in to our pre-market show at 8:30 a.m. ET any trading day. We will provide you with a list of the best Stocks in Play for that day as well as all the relevant news from the markets.

Figure 4.8: Screenshot of the Bear Bull Traders/Trading Terminal real-time scanner on December 24, 2024 at 8:33 a.m. ET. It is listing the stocks that had gapped up or down in price by more than 2% in that day's pre-market trading.

Figure 4.9: Daily charts of Rigetti Computing, Inc. (RGTI) and D-Wave Quantum Inc. (QBTS) for the last three months of 2024. You can see the volatility that followed the December 2024 announcement by Alphabet Inc. (GOOG) of significant advancements in quantum computing. Do notice as well how relative volume was significant. All quantum computing sectors were extremely active and volatile in the final weeks of 2024.

Figure 4.10: Weekly chart of American Airlines Group Inc. (AAL) from October 2019 to December 2021. You can see the periods of heavier trading volume, confirming when trading in AAL (a solid standard-bearer for the travel and leisure sectors) was super active and volatile.

Figure 4.11: Weekly chart of Invesco QQQ Trust (QQQ) for the 2022 bear market and the 2023 and 2024 bull market. QQQ tracks the Nasdaq-100, an index associated with tech companies and AI innovation.

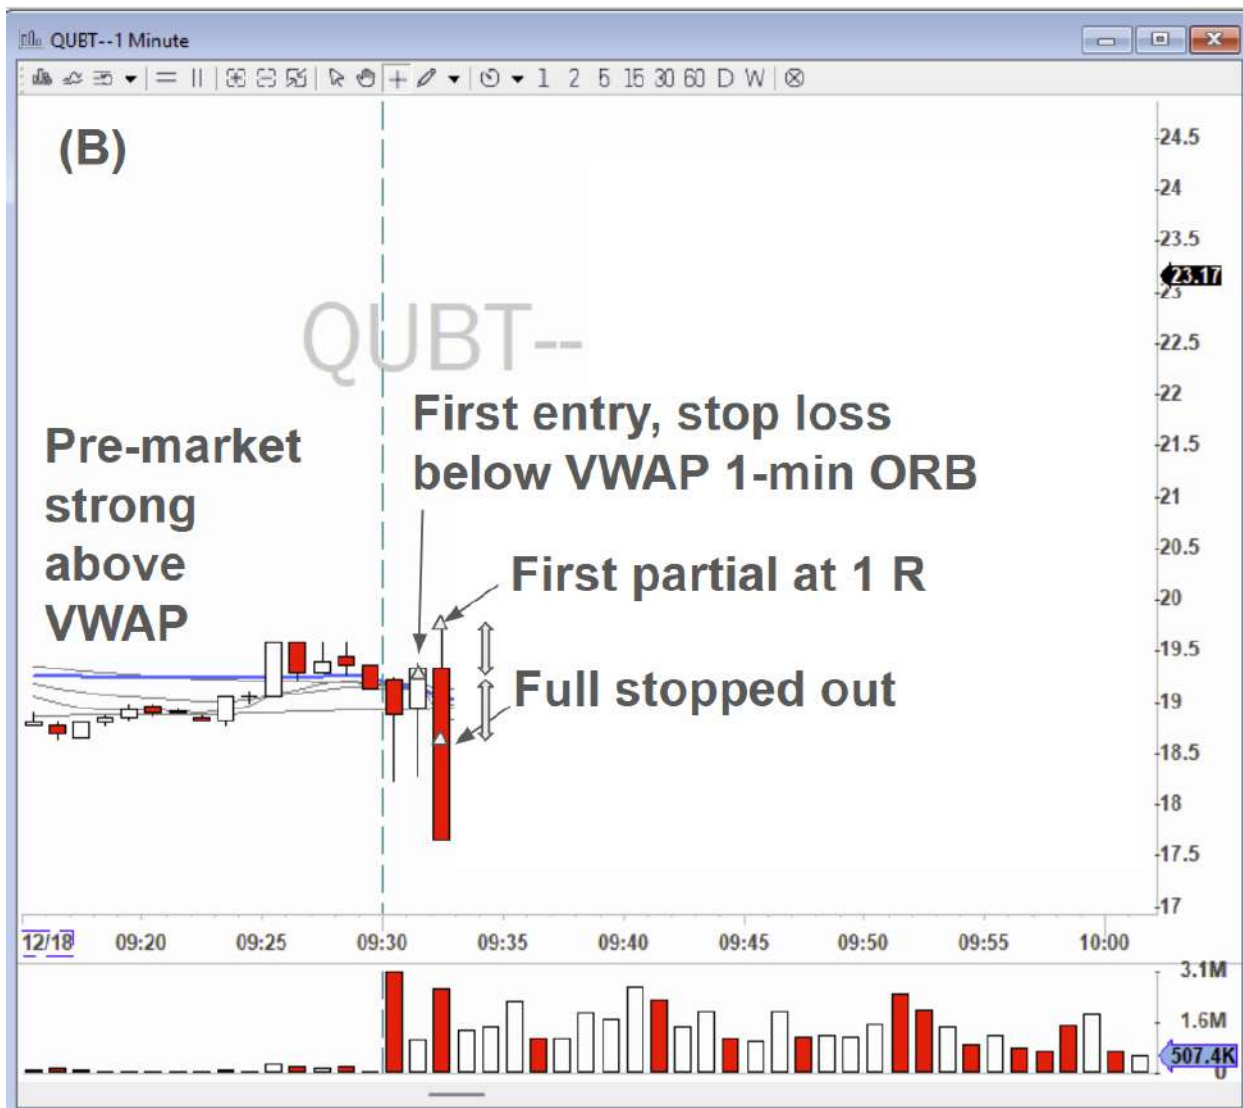

Index	Leverage	Bullish ETF	Bearish ETF	ETF Provider / Issuer

Tesla (TSLA)	2x	TSLL	-	Direxion
Apple (AAPL)	2x	AAPU	AAPB	Direxion

Table 4.1: Examples of leveraged products designed to track the daily performance of individual stocks or indexes. These instruments amplify daily returns using leverage, making them suitable for short-term trading but potentially risky for long-term holding due to the compounding effect of daily returns.

Figure 4.12: Tesla, Inc. (TSLA) Level 2 price action on March 22, 2023. (A) Pre-market trading above VWAP with a strong bullish 1-minute candlestick. A large ask at \$200.00 appears at 9:30:41 a.m. ET. (B) 40 seconds later, the \$200.00 ask is filled, leading to a clean 1-minute Opening Range Breakout at 9:31:21 a.m. ET.

Figure 4.13: Trading Quantum Computing Inc. (QUBT) during its massive gap up in December 2024. (A) The daily chart showing the breakout from \$5.00 to \$25.00, with a significant gap up beginning on December 16. (B) The first trade attempt on December 18: entry at 9:31 a.m. ET, partial at \$19.93, and stop out at \$18.50, with risk-to-reward marked by arrows. (C) The second trade on December 18: re-entry at 9:35 a.m. ET, adding into strength, and partialing from \$20.50 to over \$24.00. 1-minute chart covers pre-market action from 9:15 a.m. ET to just after 10 a.m. ET, 30 minutes into the Open.

Figure 4.14: Trading losses compound! This image illustrates how much you will need to make from your remaining funds in order to recover various losses.

Figure 4.15: The PNL (profit and loss) and equity curve of one of our best Peak Capital Trading Bootcamp traders, highlighting the journey of growing their account from \$50k to \$80k. However, this chart also reveals the significant impact of poor risk management, as two days of uncontrolled losses over three trades—referred to as “Hulk Days”—wiped out much of their gains. This serves as a powerful reminder of why disciplined risk management is essential for consistent trading success and avoiding catastrophic setbacks.

Figure 4.16: My day trading portfolio performance from September 1, 2023 to August 31, 2024, indicating a return of over 105%. In comparison, in the same time period, trading a buy-and-hold strategy on the S&P 500 via SPDR S&P 500 ETF Trust (SPY) would have returned about 18%. This highlights the potential for disciplined trading strategies and active management to significantly outperform the broader market.

Figure 4.22: My profit on June 12, 2020 (only nine minutes into my trading day).

Figure 4.23: (A) Daily chart of Netflix, Inc. (NFLX) showing a significant gap up on October 18, 2024, the day after the release of an earnings report. (B) 1-minute chart of NFLX showing its pre-market trading on October 18, 2024.

Figure 4.24: Netflix, Inc. (NFLX) 1-minute ORB trades executed on October 18, 2024. Without coming across as too boastful (!), these trades showcase precise risk management and position management strategies. They highlight the importance of (a) controlling risk while scaling into strong setups and (b) leveraging the Opening Range Breakout to maximize profitability. By carefully managing entries, exits, and position size, these trades demonstrate a disciplined approach to capitalizing on intraday opportunities.

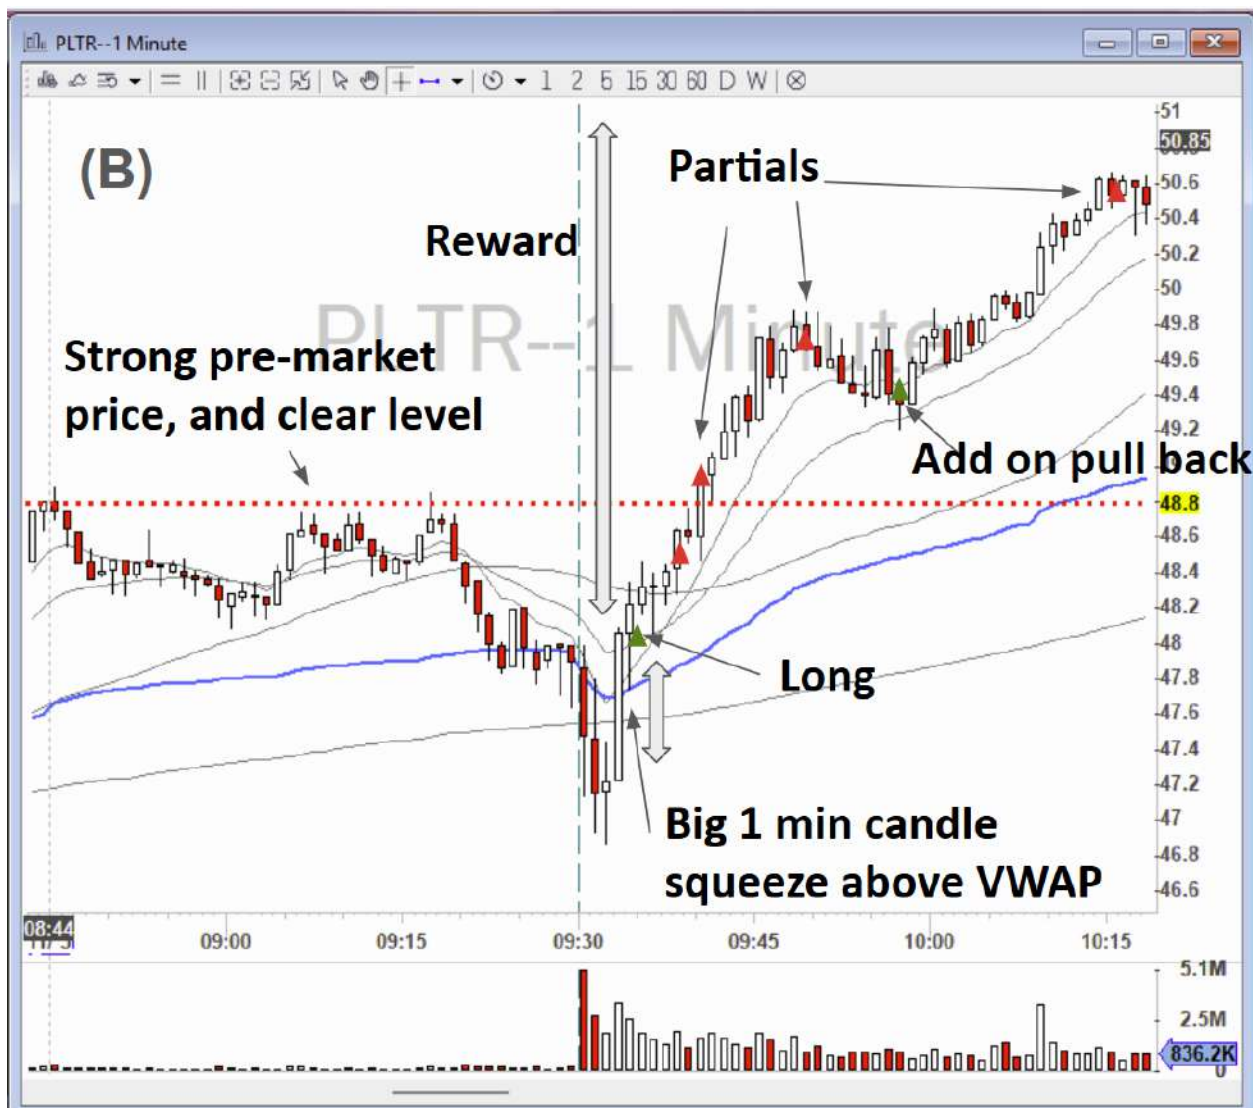

Figure 4.25: Palantir Technologies Inc. (PLTR) on November 5, 2024 – (A) Daily chart showing strong momentum with a significant gap up after the release of an earnings report on the evening of November 4, 2024. (B) 1-minute chart capturing early trading activity and key levels ahead of the market Open on November 5, 2024.

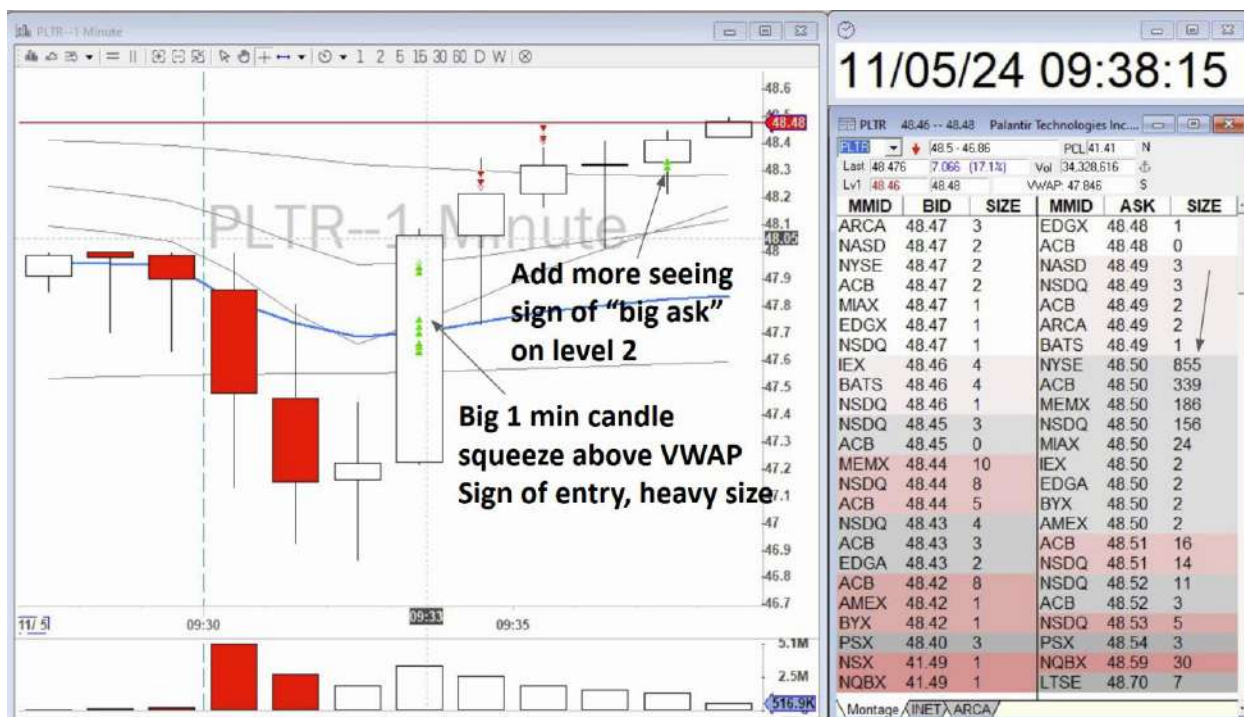

Figure 4.26: A detailed look at my Palantir Technologies Inc. (PLTR) 1-minute Opening Range Breakout (ORB) trade on November 5, 2024, showcasing strategic trade management and calculated adds. Notice the large ask orders stacked at \$48.50 on the Level 2, signaling a highly bullish setup and confirming strong momentum to the upside. This trade highlights the importance of spotting key Level 2 signals to capitalize on market strength.

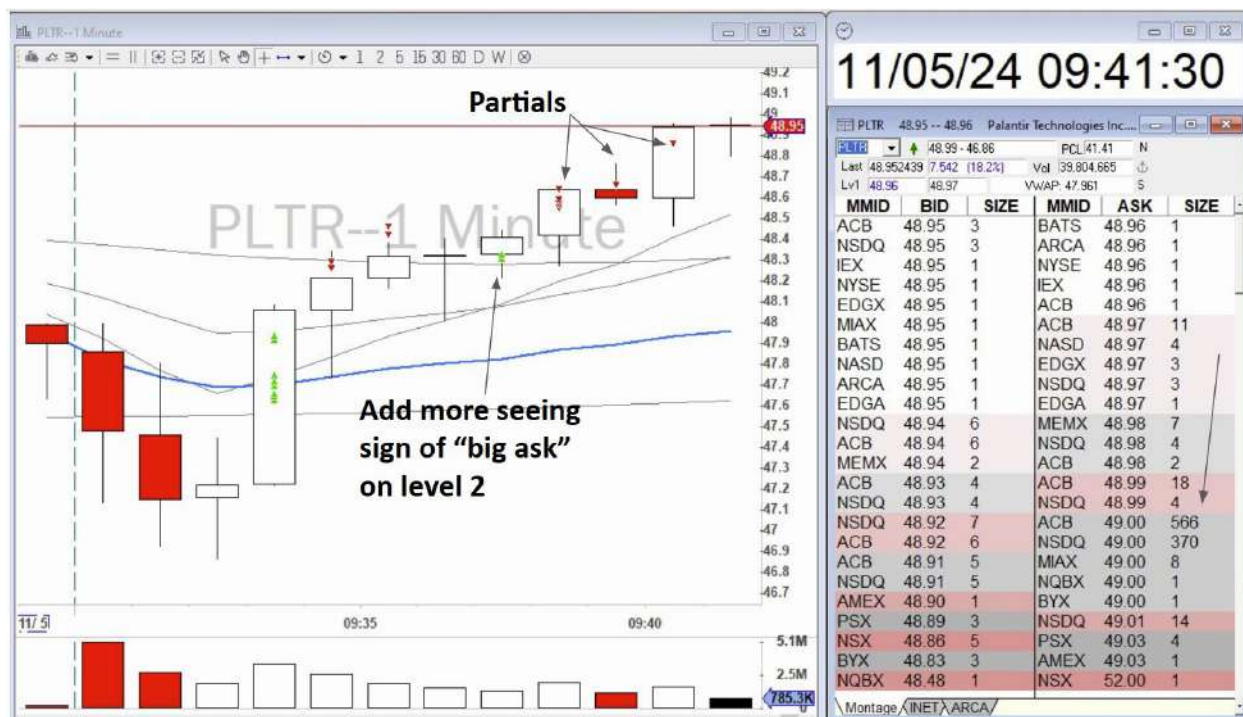

Figure 4.27: The continuation of my Palantir Technologies Inc. (PLTR) trade, now 15 minutes in, showing partials taken along the way and additional Level 2 signals that confirmed the bullish momentum. Strategic adds were executed as the trade unfolded, leading to a strong finish. The final exit for this trade was at an impressive \$50.00, locking in profits from a well-managed setup. This is a perfect example of patience and precision in trade execution.

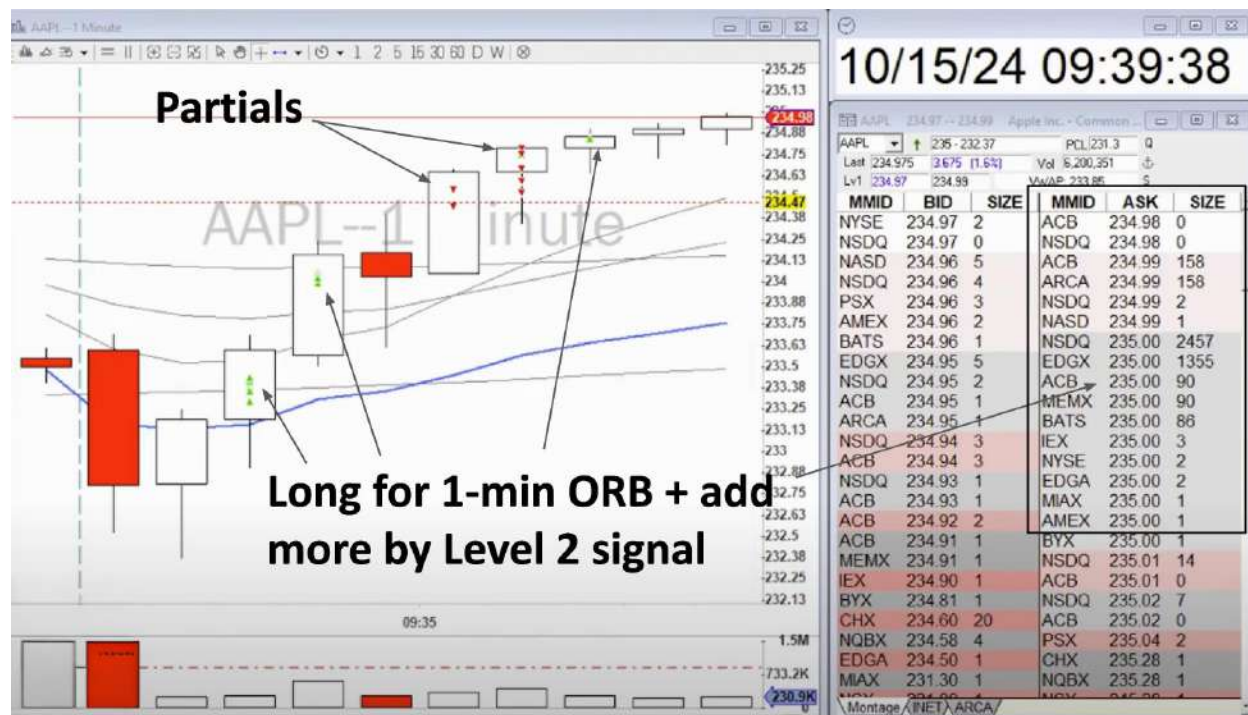

Figure 4.28: A stellar 1-minute ORB trade on Apple Inc. (AAPL) from October 15, 2024, featuring exceptional trade management and a key Level 2 signal with large asks at \$235.00. This strong bullish indicator set the stage for a highly profitable trade. Check out my YouTube channel for a detailed breakdown of this trade and the strategy behind it—do not miss the live analysis!

The screenshot displays a trading terminal interface. The main window shows a 1-minute candlestick chart for AAPL, with a price range from approximately 232.13 to 235.25. A horizontal line is drawn at the price of 234.47, which is highlighted in yellow. The text "AAPL - 1 minute" is overlaid on the chart. To the right, a market data table is visible, showing bid and ask prices for various exchanges. The video player interface at the bottom includes a play button, a progress bar at 5:07 / 10:46, and the channel name "Bear Bull Traders" with 571K subscribers. The video title is "Day Trading Strategy for AAPL All Time High".

Figure 4.29: A screenshot from my Apple Inc. (AAPL) trade recap on the Bear Bull Traders YouTube channel. In this video, I break down the key moments of the trade and share insights to help you sharpen your strategies. You can watch the full recap here: <https://youtu.be/RuKmgQg7UIk>

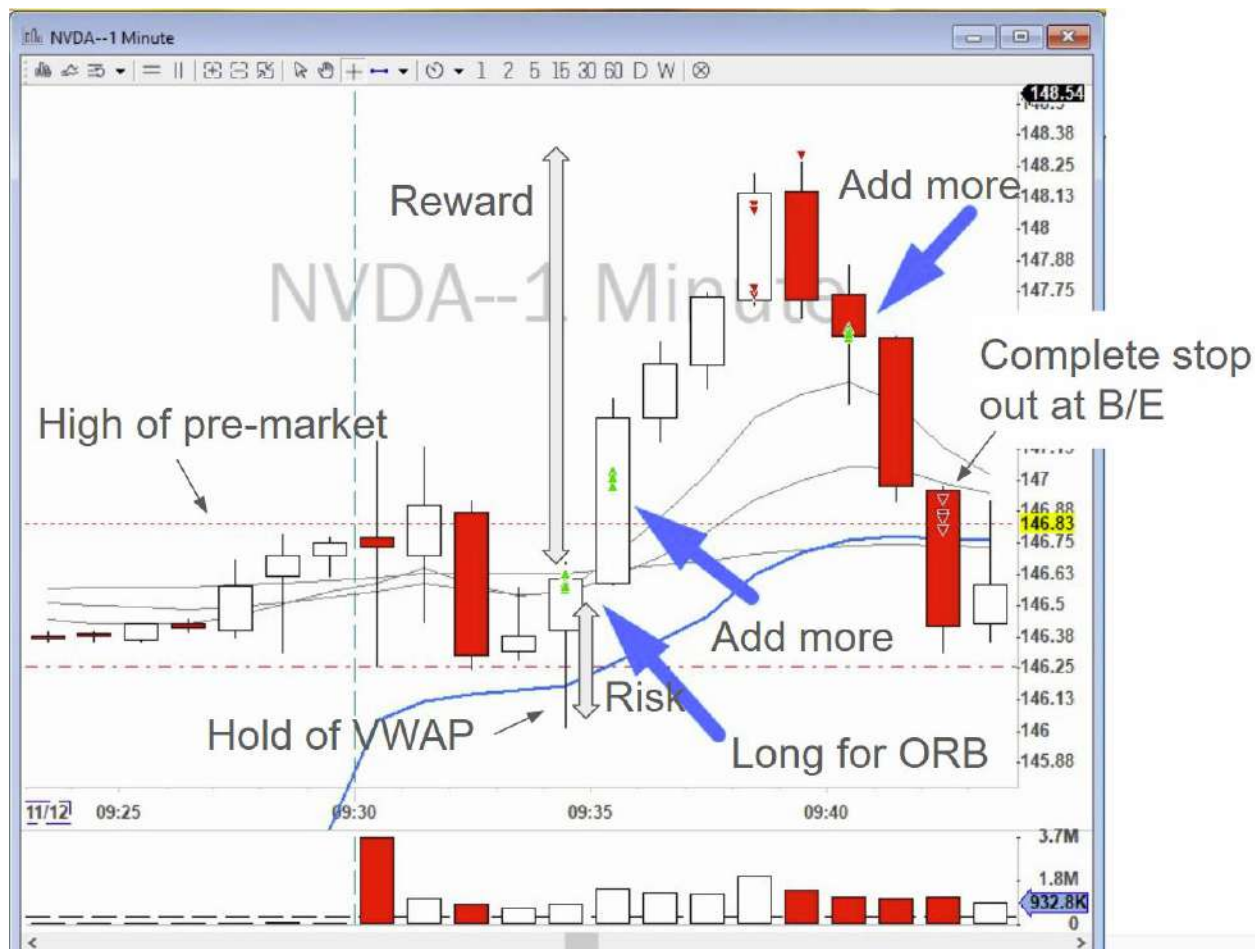

Figure 4.30: Trading NVIDIA Corporation (NVDA) on November 12, 2024 – a prime example of spotting relative strength in the market. While the S&P 500 and the Invesco QQQ Trust (QQQ) were slightly gapping down, NVDA stood out, gapping up 2% amidst overall market uncertainty. This divergence was tied to the post-election rally in cryptocurrencies, driven by optimism around President-Elect Trump’s expected deregulation of the financial and crypto markets. As crypto mania surged, NVDA, with its exposure to the sector, became a focal point for traders. This is a perfect illustration of how macro context and sector strength can align for an excellent trade setup.

Figure 4.31: While I was trading NVIDIA Corporation (NVDA) shares on November 12, 2024, my fellow trader Avi Mahtani executed the same setup using options, highlighting how mastering price action works across different instruments. As NVDA showed strength pre-market, we both identified the \$146.83 level as a key breakout point. Avi chose NVDA \$146.00 call options, expiring that week, and turned this setup into an impressive \$7,972 profit. This is a great example of how flexibility in trading tools can align with strong market analysis for success.

Figure 4.32: Tesla, Inc. (TSLA) trade on November 13, 2024 – Daily chart showing key levels at \$338.00, \$338.89, and \$339.86 (and marked more clearly on Figure 4.33 below), setting up a perfect ORB on the 1-minute chart after a pre-market gap up.

Figure 4.33: Tesla, Inc. (TSLA) 1-minute chart on November 13, 2024, showcasing strong momentum and exhaustion as the price approached key resistance levels during the ORB setup.

Figure 4.34: Lyft, Inc. (LYFT) trade on November 7, 2024 – 1-minute chart showing a Bullish Engulfing Pattern, followed by strategic adds and exits, capturing the move up to \$18.80 with precise execution.

Figure 4.35: Lyft, Inc. (LYFT) trade on November 7, 2024 – 5-minute chart showing a Bullish Engulfing Pattern, followed by strategic adds and exits, capturing the move up to \$18.80 with precise execution.

Figure 4.36: Tesla, Inc. (TSLA) on November 18, 2024 – (A) Daily chart showing a +6% gap up driven by news of the incoming Trump administration's plans to regulate robotaxis, boosting TSLA's outlook as a sector leader. (B) Pre-market 1-minute chart highlighting high volume and a 7 to 8% surge, setting the stage for a strong trading session. Even though TSLA was trading below VWAP in the pre-market, I was prepared for both scenarios: a 1-minute ORB breakout above VWAP if it reclaimed the level or a breakdown below the pre-market low if selling pressure continued.

Figure 4.37: Tesla, Inc. (TSLA) 1-minute chart on November 18, 2024, showcasing an executed TradeBooked strategy for the 1-minute ORB. There were also two other trades: one where I got stopped out and a third trade where TSLA reclaimed VWAP, prompting me to re-enter and add more shares as it moved toward breaking the high of the day.

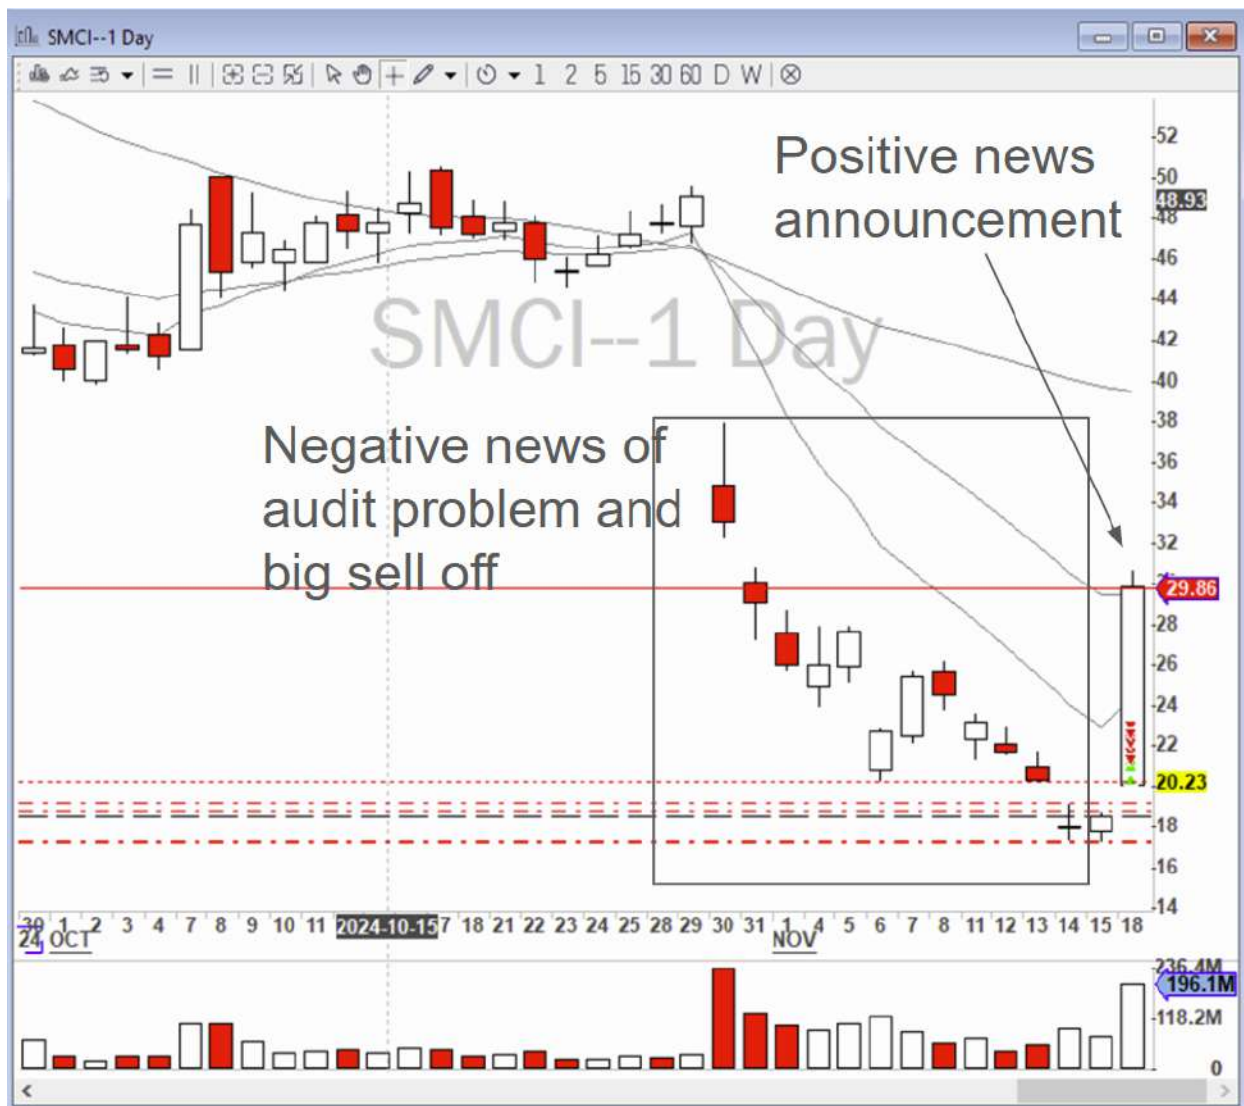

Figure 4.38: Super Micro Computer, Inc. (SMCI) daily chart on November 18, 2024. This daily chart highlights the stock's movement and key levels as it responded to market conditions, which ultimately led to a potential trading opportunity.

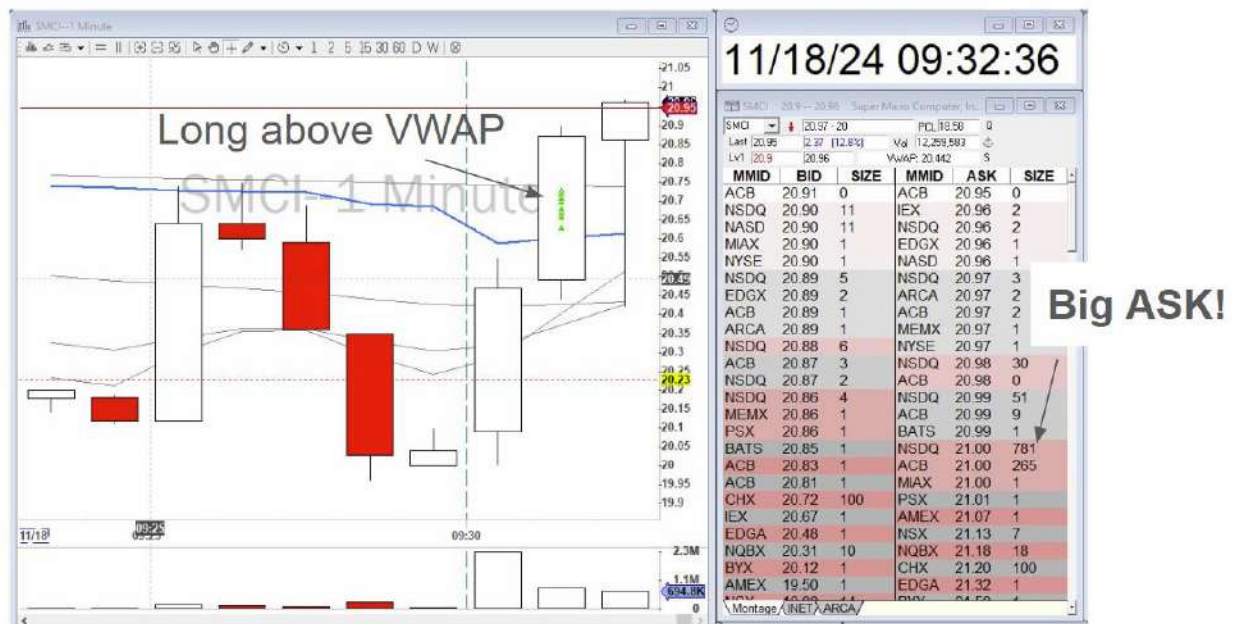

Figure 4.39: Super Micro Computer, Inc. (SMCI) 1-minute chart on November 18, 2024. You can see my entries at 9:32 a.m. ET, which were supported by a strong Level 2 signal with a large ask at \$21.00, confirming bullish momentum.

Figure 4.40: Super Micro Computer, Inc. (SMCI) 1-minute chart on November 18, 2024. You can track my strategic entries at 9:32 a.m. ET, my calculated adds during the stock's move, and my final exits at 9:53 a.m. ET. Supported by a strong Level 2 signal with a large ask at \$21.00, this trade capitalized on bullish momentum for maximum profitability.

Figure 4.41: Super Micro Computer, Inc. (SMCI) daily chart showing SMCI's volume spikes and its significant drop in value from \$50.00 to \$38.00 in late October 2024.

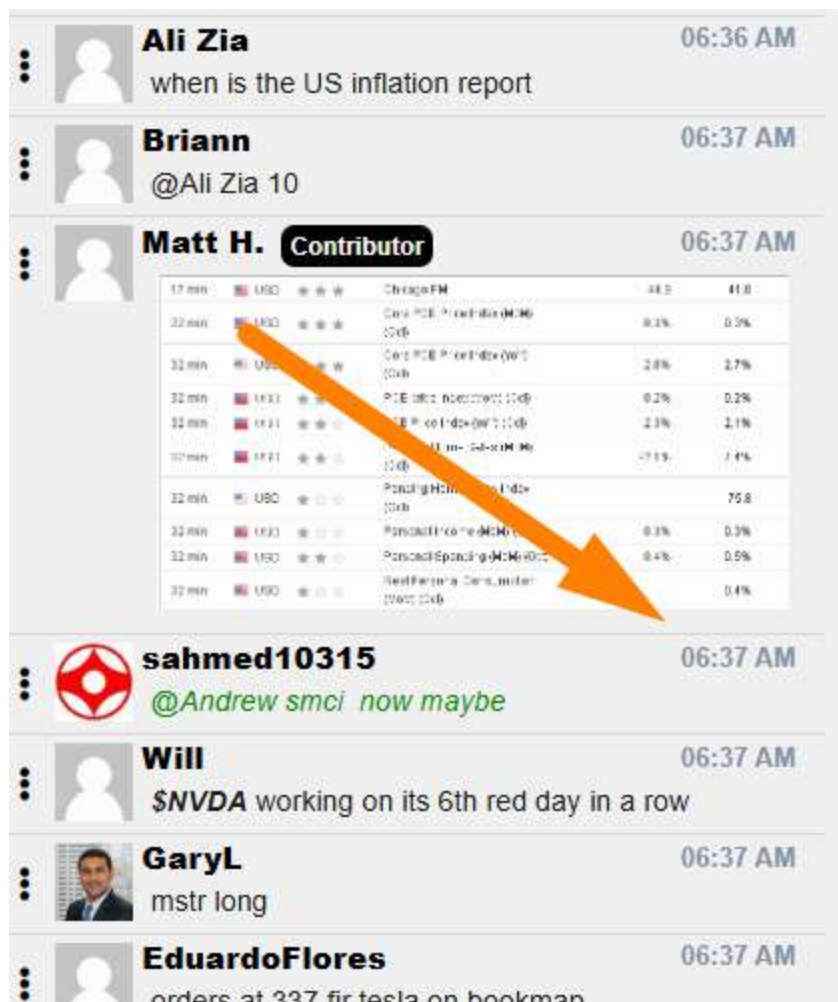

Figure 4.42: Super Micro Computer, Inc. (SMCI) 1-minute chart for November 27, 2024, showing its trading in the pre-market.

The screenshot shows a chat thread with several messages. The message from **Matt H. Contributor** at 06:37 AM contains a table of stock price changes. An orange arrow points to the row for Super Micro Computer, Inc. (SMCI).

Time	Symbol	Change	Open	Close
17 min	USD	ChicagoEM	44.3	44.8
22 min	USD	Cost PCB Price Index (MOM) (D)	0.2%	0.3%
22 min	USD	Cost PCB Price Index (WTD) (D)	2.8%	2.7%
22 min	USD	PCE Price Index (MOM) (D)	0.2%	0.2%
22 min	USD	PCE Price Index (WTD) (D)	2.3%	2.1%
22 min	USD	U.S. Consumer Price Index (MOM) (D)	-0.1%	0.4%
22 min	USD	Pending Home Sales (MOM) (D)		75.8
22 min	USD	Pending Home Sales (MOM) (D)	0.3%	0.3%
22 min	USD	Pending Home Sales (MOM) (D)	0.4%	0.5%
22 min	USD	Redfin's Core Home Sales (MOM) (D)		0.4%

Below the table, the chat continues with messages from **sahmed10315** (@Andrew smci now maybe), **Will** (\$NVDA working on its 6th red day in a row), **GaryL** (mstr long), and **EduardoFlores** (orders at 337 fir tesla on hookman).

Figure 4.43: “sahmed10315”, one of the traders in our community, pointed out Super Micro Computer, Inc.’s (SMCI) potential breakout at 6:37 a.m. PT (which is 9:37 a.m. ET). I quickly moved from the stock I was studying to look at SMCI’s setup, as I was not watching SMCI’s price action at that moment.

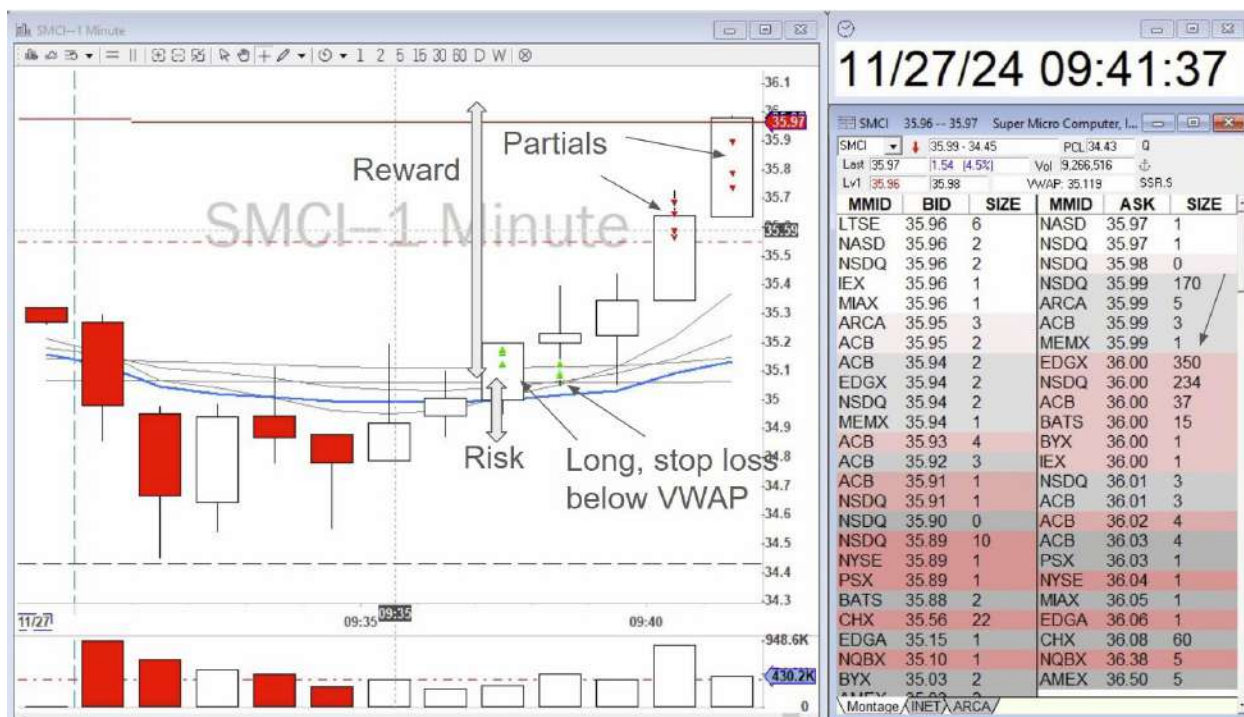

Figure 4.44: Super Micro Computer, Inc. (SMCI) 1-minute chart for November 27, 2024, marked with my entries. You can also see on the right-hand side of this screenshot the big asks at \$36.00 and above. At the same time, my trading colleague, Brian Pezim, confirmed SMCI's high liquidity with the use of Bookmap.

Figure 4.45: Super Micro Computer, Inc. (SMCI) 1-minute chart for November 27, 2024, showing how my trade unfolded. The full trade review can be seen in my recap for November 27, 2024 on the Bear Bull Traders YouTube channel.

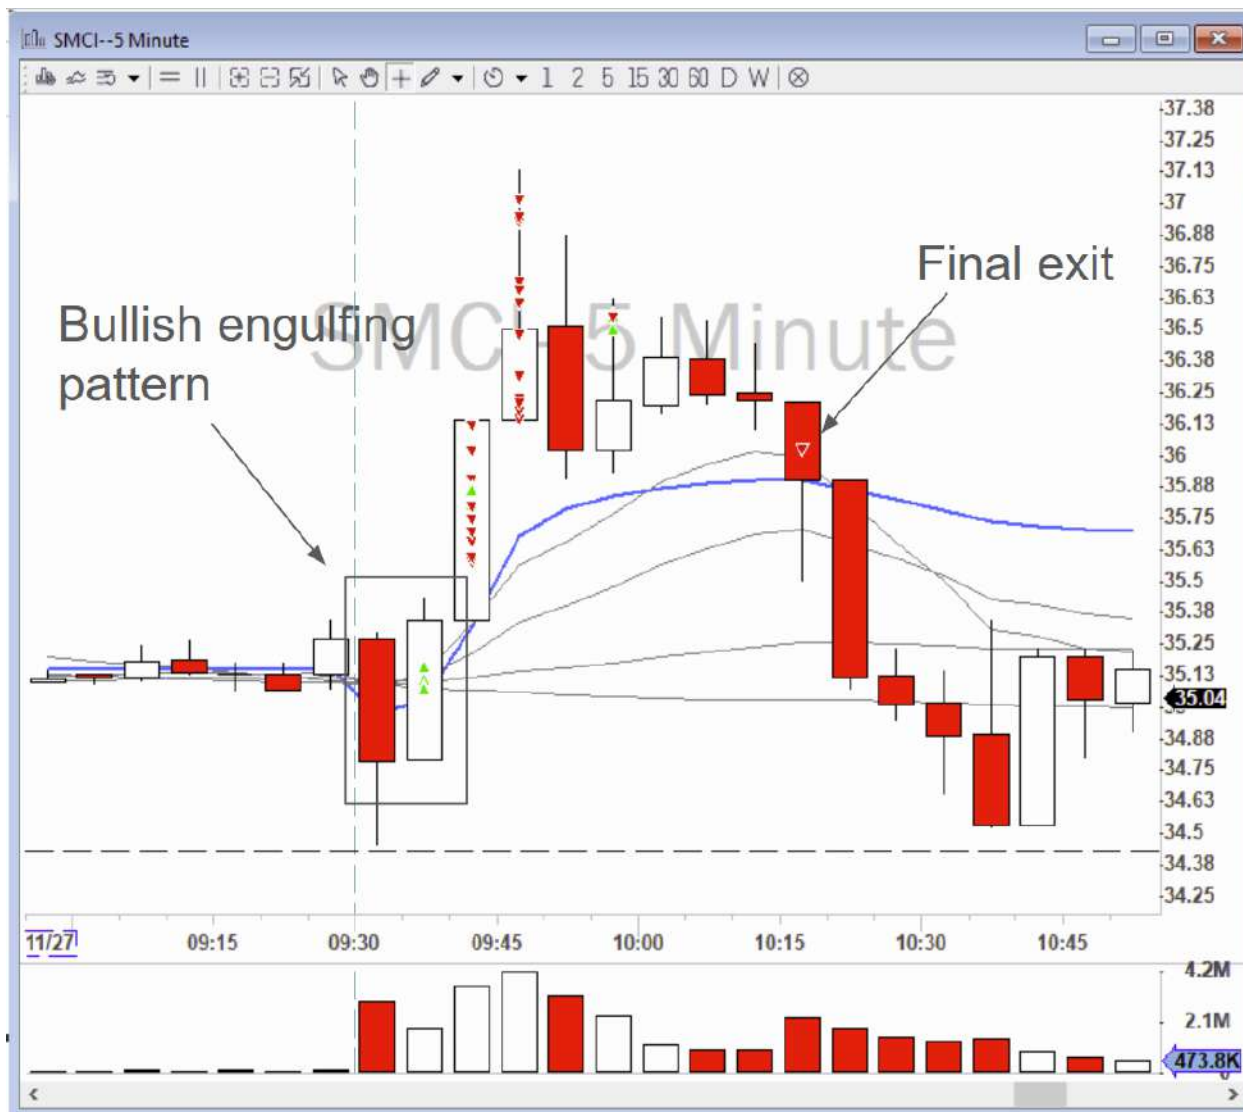

Figure 4.46: Super Micro Computer, Inc. (SMCI) 5-minute chart for November 27, 2024, illustrating the Bullish Engulfing Pattern that triggered my trade.

Strategy	Indicators	Confirmations	Entry Signal	Stop Loss	Target points	Rules
Strategy (A) R3/S3 Traverse	Pivot Points R3, S3 ¹ Imbalanced order book (L2) ² Good volume ³	Price Open <u>Above S3</u> or <u>Below R3</u> . Reversal candlestick patterns like wicks or reversal or etc.	Buy at S3 Sell at R3	<u>Below S3</u> for Buy <u>Above R3</u> for Sell	Midpoint between S3 & R3 or previous support/resistance levels. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Confirm reversal signals with candlestick patterns before entry.
Strategy (B) Trending R4/S4 Breakout	Pivot Points R4, S4 ¹ Imbalanced order book (L2) ² Good volume ³	Price opens <u>Below R3</u> or <u>Above S3</u> . Strong price movement with volume spike ⁴ <u>Above R4</u> or <u>Below S4</u> . Check for RVOL (Prefer above 100%).	Buy when price breaks <u>above R4</u> with volume confirmation. Sell when price breaks <u>below S4</u> with volume confirmation.	<u>Below R4</u> for Buy <u>Above S4</u> for Sell	Use R5 for Buy targets, and S5 for Sell targets. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Avoid fake breakouts by waiting for confirmation via volume & candles closing beyond R4/S4.
Strategy (C) R4/S4 Breakout	Pivot Points R4, S4 ¹ Imbalanced order book (L2) ² Significant volume	Price Open <u>Above R4</u> or <u>Below S4</u> . Reversal patterns like Bullish/Bearish Engulfing at breakout level. Significant increase in volume as price breaks R4 or S4.	Buy when price breaks <u>Above R4</u> with high volume. Sell when price breaks <u>Below S4</u> with high volume.	<u>Below R4</u> for Buy <u>Above S4</u> for Sell	Use R5 for Buy targets, and S5 for Sell targets. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Watch for fake breakouts, avoid premature entries without volume confirmation.
Strategy (D) S4/R4 Breakout Against the Trend	Pivot Points S4, R4 ¹ Imbalanced order book (L2) ² Good volume ³	Open <u>Below S4</u> / <u>Above R4</u> against the trend. Price reversal patterns like Hammer or Shooting Star at S4/R4.	Sell when price breaks <u>Below S4</u> Buy when price breaks <u>Above R4</u>	<u>Above S4</u> for Sell <u>Below R4</u> for Buy	Use R5 for Buy targets, and S5 for Sell targets. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Be cautious as this is a counter-trend strategy, which has higher risk. Confirm reversal signals with candlestick patterns & volume before entry.

Strategy	Indicators	Confirmations	Entry Signal	Stop Loss	Target points	Rules
Strategy (E) R4/S4 Extreme Reversal	Pivot Points R4, S4 ¹ Imbalanced order book (L2) ¹ Good volume ³	Price opens <u>Below R4 or Above S4</u> . Price forms reversal patterns like Double Top/Bottom or Engulfing Candles. Multiple Retest on R4/S4 is preferred.	Sell when price hits R4, with bearish/reversal patterns. Buy when price hits S4 with bullish/reversal patterns.	<u>Above R4</u> for Sell <u>Below S4</u> for Buy	Midpoint or previous pivot levels. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Confirm Rejection: Ensure rejection at R4/S4 is strong, with clear bearish/bullish signals (<i>i.e. multiple touch</i>). Avoid Low Volume: as it can result in false breakouts or lack of movement. Risk Management: Keep stops tight, as the market can be volatile near R4.
Strategy (F) R6/S6 Reversal	Pivot Points R6, S6 ¹ Imbalanced order book (L2) ² Significant volume	Price opens <u>Below R6 or Above S6</u> . Clear reversal such as engulfing pattern with significant volume.	Sell at R6 with bearish/reversal patterns. Buy at S6 with bullish/reversal patterns.	<u>Just Above R6</u> for Sell <u>Just Below S6</u> for Buy	First Target might be a large pullback to R4/S4 or even lower. Next pivot level, or the midpoint between the S6/R6 and previous support/resistance. Use Strong Buy/Sell orders per orderbook (L2). Trailing stop can be employed to maximize profit in strong trends.	Caution: Trades at R6/R6 should be taken with strong confirmation, as the level represents an extreme move in the market. Avoid Chasing trades at R6/S6 if confirmation is weak or if the market is too volatile. Due to the potential for large price swings, aggressive risk management is necessary.

1. Check the daily charts to understand the bigger picture and see how today's opening price and close pivot point compares to key levels like the previous day's high, low, and close.
2. Look for orders above 5000 shares.
3. Good volume: premarket volume of around 500,000 shares or so are ideal. RVOL above 100% could be another good sign of good volume.
4. Spike volume: 50%-100% above the stock's average daily volume.

Figure 6.12: Example of TradeBook trade by Peter De Beir. Please note, the goal of this chapter is not for you to follow our Peak Capital Trading traders' plans exactly, but to understand how they are building their TradeBooks and what kinds of elements they include. I apologize for the low-quality pictures in this section.

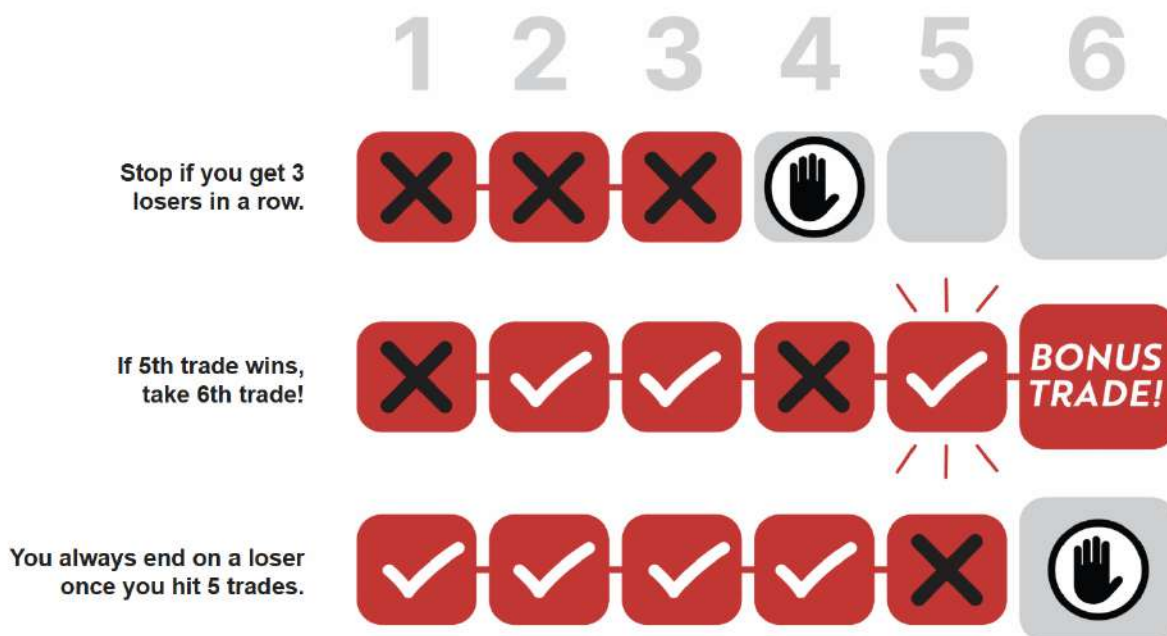

Figure 6.13: A chart Peter De Beir included in his TradeBook to remind himself when to stop trading.

Figure 6.14: Peter De Beir’s Hotkey Stream Deck labeling — Note that this can be adjusted and personalized. It is perfectly fine if readers of this book might not fully understand what these labels mean at first. Do not worry about it at all!

LEFT BRAIN DOMINANCE

The gray tones on the left side of the scale were selected to represent the left-brain style, which thinks in mostly 'black and white' terms. To expand on the description above, left brain dominance is a mindset that is analytical, objective, literal, sequential, numeric, deliberate and even a bit 'judgmental.'

Regarding the judgmental trait, left brain dominance comes with a clear sense of right and wrong, good and bad, and lots of other polarities. Therefore, it has a psychological range that runs from 'Balanced' to 'Rigid,' as shown on the scale above.

Left Brain Dominance (50-59)

A Left-Brain Dominance Score in the 50s indicates that you have a relatively balanced brain.

Although, you prefer an analytical approach to life and trading, you also have access to the real-time tactical (and improvisational) skills that arise from the right side. So, you can "think on your feet," so to speak. You can handle surprises, and you don't get intimidated by adversity.

Figure 6.15: Peter De Beir's Brain Profile. Your own profile can be accessed via our in-house trading psychologist and coach, Dr. Kenneth Reid. Here is the link: <https://www.daytradingpsychology.com/trader-brain-profile/>

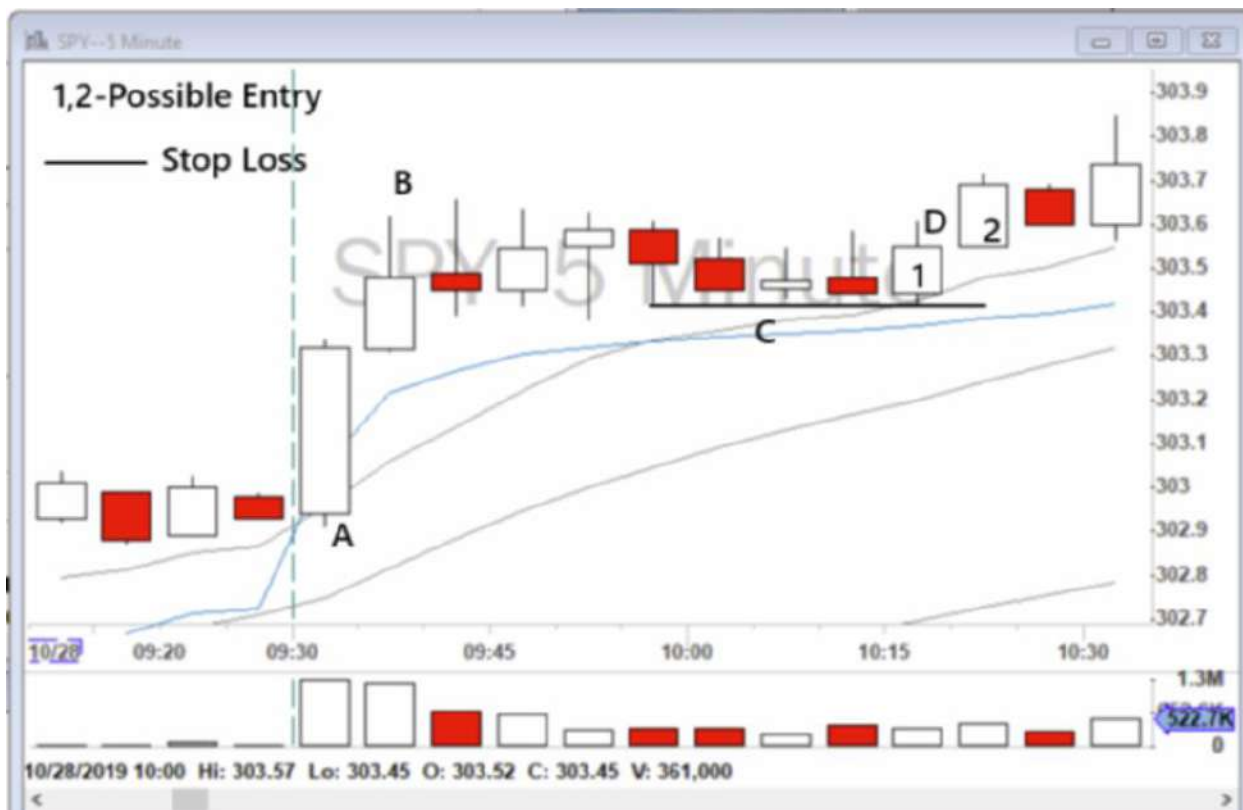

Figure 6.16: Examples of ABCD Pattern trades taken by Raymond Leung.

Figure 6.17: Example of a short Lucky #13 trade by Kev Brown on Tesla, Inc. (TSLA). Kev Brown entered on the break of the crossing candle. Took partials at whole dollar levels, then exited when a candle opened above the 13 EMA, signaling a potential trend shift.
